

Submittal Information for Green Building Project

This form is used for PROSOCO Clean & Protect products. For the product described, it includes all submittal information relevant for LEED O+M: Existing Buildings as well as for all other LEED v4.x rating systems. Please see page 2 for specific LEED guidance by product category.

Product:

Consolideck® LSKlean ULTRA 15

Description:

Consolideck® LSKlean ULTRA 15 is a highly concentrated maintenance cleaner specially designed for use in automatic floor scrubbers.

VOC CONTENT:

VOC content of product:

0

VOC regulatory category:

Regulated under CA Consumer Product Rule (not CARB 2007)

MATERIAL INGREDIENT OPTIMIZATION:

EPA Safer Choice: Does the PROSOCO product have an EPA Safer Choice label (relevant for cleaning products):

No

RAW MATERIAL SOURCING:

Recycled content and rapidly renewable or bio-based materials:

PROSOCO products are manufactured with 0% pre- or post-consumer recycled materials content and 0% rapidly renewable, bio-based or wood materials content.

Extraction location:

PROSOCO is not generally able to provide extraction location of raw materials. When available, extraction location will be provided on the product's Declare label.

MANUFACTURING LOCATION

This product is manufactured in:

Lawrence, KS

ADDITIONAL INFORMATION

Supporting documentation is available at www.prosoco.com/sustainability.

For a more comprehensive review of how use of PROSOCO products supports high-performance green building, or for detailed guidance on how the information above supports specific credit requirements of different building certification programs, see www.prosoco.com/sustainability.

Please see page 2 for LEED guidance by product category for PROSOCO clean & protect products.

SUMMARY OF LEED RELEVANCE

Interior Use Cleaning Products: These products cannot contribute or detract from gaining LEED credits in most LEED rating systems, except as outlined below:

LEED Operations & Maintenance: Existing Buildings LEEDv4: Green Cleaning Products. PROSOCO's products with an EPA Safer Choice label (formerly EPA Design for the Environment) support this credit. EPA Safer Choice cleaning products also support achievement of Living Building Challenge v3 Imperative 08: Healthy Interior Environment.

Exterior Use Cleaners, Sealers, and Coating Products: These products cannot contribute or detract from gaining LEED credits in most LEED rating systems, except as outlined below:

Generic credits (applying to all products): All permanently installed exterior and interior products may be included in calculations for achievement of generic product credits in all LEED rating systems (e.g. recycled content or local sourcing). The information needed for those calculations is included on this form.

LEEDv4 Schools & Healthcare: Exterior applied products must meet either SCAQMD 1168 or CARB 2007, for applicable product categories.

Protective concrete or masonry sealers & coatings: LEED contains no specific credits relating to exterior concrete or masonry sealers and protective coatings. In many cases these products are also not a regulated category for VOCs in California. (Use of these products can support LEED goals of adaptive reuse but cannot directly contribute or detract from any LEED credits).

Cleaners: There is no appropriate LEED criterion to rate attributes of exterior cleaning products (no LEED relevance).
