PALLET TAG PROGRAM LABORATORY REPORT

Purpose of Testing

One type of ground-face and five types of split-face integrally colored CMU's, nine types of split-face retaining walls and six types of concrete pavers, all with large, small and fine aggregate were submitted for testing using PROSOCO, Inc.'s new construction cleaning products, water repellents, graffiti control products, stain repellents and color enhancement products.

New Construction Cleaning – Sure Klean® Custom Masonry Cleaner and Sure Klean® Burnished Custom Masonry Cleaner were evaluated to determine the optimal concentration of cleaner for removal of laboratory applied mortar which also leaves the external surface looking most like the natural through-body color of the CMU. Sure Klean® Custom Masonry Cleaner and Sure Klean® Burnished Custom Masonry Cleaner were also evaluated to determine the optimal concentration of cleaner that leaves the external surface looking most like the natural through-body color of the submitted retaining walls and concrete pavers.

To simulate new construction soiling all concrete masonry units (CMU's) are placed on a bench with finished surface facing upward. Hollow cylinders measuring 50 mm in diameter and 75 mm tall are positioned on top of each CMU and filled with a wet mixture of Type S mortar. The wet, mortar-filled cylinder is allowed to remain in contact with the CMU for 10 minutes before removal.

Heavy deposits of mortar are removed with dry scraping after 24 hours. Prepared cleaning solutions are then evaluated for their effectiveness in removing residual Type S mortar staining after 3 days, 7 days, and 14 days of curing.

Color uniformity was evaluated by comparing aggregate exposure and surface pigment alternation/removal of each cleaned surface compared to the natural through-body color of the CMU, retaining wall or concrete paver.

Aggregate Exposure is the visual examination comparing aggregate exposure of the interior, through-body section of sample to surfaces cleaned with selected product(s) at given dilutions.

Surface Pigment Alteration/Removal is the visual examination comparing the pigmentation of the interior, through-body section of the sample to surfaces cleaned with selected product(s) at given dilutions.

The following is the scale used for reporting results of both categories:

- | | |
|--|---------------------------------------|
| 0 – Worst match to through-body | 3 – Good match to through-body |
| 1 – Poor match to through-body | 4 – Best match to through-body |
| 2 – Fair match to through-body | |

NOTE: When cleaning integrally colored CMU's, retaining walls and concrete pavers.

Integrally colored concrete masonry units (CMU's), retaining walls and concrete pavers frequently have high amounts of pigments concentrated on the surface of the cured concrete unit. Variation of surface pigment concentrations from one sample to the next creates a blotchy appearance in the completed wall. Allowed to remain on the surface of the sample, the weakly bound pigment will weather and streak, further detracting from the appearance of the completed project.

In addition to removing excess mortar and construction related soiling, the goal of any cleaning operation undertaken on an integrally colored substrate should include removal of unnaturally high concentrations of surface pigment. By revealing the natural through-body color on the integrally colored unit, the overall color uniformity and weathering resistance of the completed project is improved.

Protective Water Repellents – Sure Klean® Custom Masonry Sealer and Sure Klean® Weather Seal Siloxane WB Concentrate were evaluated for their ability to provide water repellency to the submitted CMU's and retaining walls. Sure Klean® Paver Enhancer, Consolideck® Saltguard® WB and Stand Off® SLX100 Water & Oil Repellent were evaluated for their ability to provide water repellency to the submitted concrete pavers.

Graffiti Control – Sure Klean® Custom Masonry Sealer was evaluated for its ability to control graffiti on the submitted samples. Sure Klean® Fast Acting Stripper and Defacer Eraser® Graffiti Wipe were evaluated for their ability to remove graffiti from the submitted CMU's and retaining walls.

Stain Repellency – Stand Off® Stone, Tile & Masonry Protector (STMP) and Stand Off® SLX100 Water & Oil Repellent were evaluated on the submitted concrete pavers for their ability to repel stains.

Color Enhancement – Sure Klean® Paver Enhancer and Stand Off® Gloss 'N Guard were evaluated for their ability to provide color enhancement to the submitted concrete pavers.

PALLET TAG PROGRAM LABORATORY REPORT

Products Evaluated

Products Evaluated for New Construction Cleaning

Sample	Product	Dilution
All Submitted Split-face CMU's	Sure Klean® Custom Masonry Cleaner	1:2, 1:4, 1:6
All Submitted Ground-face CMU's	Sure Klean® Burnished Custom Masonry Cleaner	1:2, 1:3
All Submitted Split-face Retaining Walls (Color Uniformity Only)	Sure Klean® Custom Masonry Cleaner	1:2, 1:4, 1:6
	Sure Klean® Burnished Custom Masonry Cleaner	1:2, 1:3
All Submitted Concrete Pavers (Color Uniformity Only)	Sure Klean® Custom Masonry Cleaner	1:6
	Sure Klean® Burnished Custom Masonry Cleaner	1:2, 1:3

Water Repellent Products Evaluated

Sample	Product	Dilution
All Submitted CMU's and Retaining Walls	Sure Klean® Custom Masonry Sealer	Concentrate
	Sure Klean® Weather Seal Siloxane WB Concentrate	1:9, 1:14
All Submitted Concrete Pavers	Sure Klean® Paver Enhancer	Concentrate
	Consolideck® Saltguard® WB	Concentrate
	Stand Off® SLX100 Water & Oil Repellent	Concentrate

Graffiti Control Products Evaluated

Sample	Product	Dilution
All Submitted CMU's and Retaining Walls	Sure Klean® Custom Masonry Sealer	Concentrate

Graffiti Removal Products Evaluated

Sample	Product	Dilution
All Submitted CMU's and Retaining Walls	Sure Klean® Fast Acting Stripper	Concentrate
	Defacer Eraser® Graffiti Wipe	Concentrate

Stain Repellent Products Evaluated

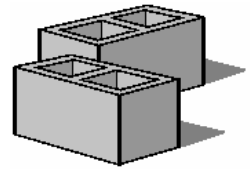

Sample	Product	Dilution
All Submitted Concrete Pavers	Stand Off® Stone, Tile & Masonry Protector (STMP)	Concentrate
	Stand Off® SLX100 Water & Oil Repellent	Concentrate

Color Enhancement Products Evaluated

Sample	Product	Dilution
All Submitted Concrete Pavers	Sure Klean® Paver Enhancer	Concentrate
	Stand Off® Gloss 'N Guard	Concentrate

PALLET TAG PROGRAM LABORATORY REPORT

New Construction Cleaning

These cleaning trials were conducted to determine the optimal cleaning/cure time combination to most efficiently remove Type S mortar from the submitted CMU's while providing the best color uniformity when compared to the through-body color of the CMU's. Cleaning trials were also conducted to determine the cleaner and dilution that gives the best color uniformity when compared to the through-body color of the retaining walls and concrete pavers.

Type S mortar was prepared in compliance with the manufacturer's instructions, applied to the CMU surface and allowed to cure for 3, 7, and 14 days. Mortar removal was accomplished using chemical assistance and a high-pressure water rinse with pressure rinsing equipment. The removal of Type S masonry mortar was visually evaluated after 3, 7, and 14 days of curing.

A visual examination was also made to determine the optimal dilution of the tested cleaners that provide the best color uniformity when compared to the through-body color of the CMU's, retaining walls and concrete pavers.

Description of Products Evaluated – New Construction Cleaning

Sure Klean® Custom Masonry Cleaner – A general purpose, concentrated acidic cleaner for most custom masonry and colored concrete. Removes concrete splashes, excess mortar, mud, heavy efflorescence and surface soiling, leaving the masonry clean and uniform with no acid burning or streaking. Liquid concentrate for dilution with 2-6 parts water. Apply by brush or low-pressure spray.

Sure Klean® Burnished Custom Masonry Cleaner – Removes common construction and atmospheric staining from custom masonry and other architectural concrete surfaces. This general-purpose, non-etching, acidic cleaner removes rust, mud, oil, atmospheric dirt, mortar smears and other stains without altering the surface texture. Burnished Custom Masonry Cleaner adds depth to colors and brightens white matrices and exposed aggregate.

Test Method – New Construction Cleaning

Dilution ratios refer to mixtures of parts concentrated cleaner: parts fresh water. Chemical cleaners were evaluated using the following procedure:

1. Pre-wet the surface with water.
2. Apply at the appropriate dilutions.
3. Allow appropriate dwell time, as specified.

Sure Klean® Custom Masonry Cleaner	3 minutes
Sure Klean® Burnished Custom Masonry Cleaner	3-5 minutes
4. Reapply the product and moderately agitate with a brush.
5. Pressure rinse thoroughly.*
6. Allow the sample to dry for at least 18 hours and visually examine.
7. Break the sample in half and compare the through-body surfaces to the cleaned surfaces for the best match.

***Pressure Rinsing Equipment** – Masonry washing equipment generating approximately 1300 psi with a water flow rate of 1.9 gallons per minute delivered through a 45 degree fan spray tip was used for rinsing.

PALLET TAG PROGRAM LABORATORY REPORT

Conclusions – New Construction Cleaning

Based on the test data, all of the submitted split-face CMU's were efficiently cleaned with Sure Klean® Custom Masonry Cleaner and all of the submitted ground-face CMU's were efficiently cleaned with Sure Klean® Burnished Custom Masonry Cleaner. Higher concentrations and surface agitation maximize aggregate exposure of the submitted CMU's, retaining walls and concrete pavers while lower concentrations and surface agitation minimize aggregate exposure.

Recommendations – New Construction Cleaning

Recommendations for cleaning for each sample submitted by Masolite, Fort Wayne, IN are provided in the chart below. Recommendations for new construction cleaning are based on the optimum dilution for complete removal of mortar while providing the best match to the through-body color of CMU's. Recommendations for color uniformity are based on the cleaner that provides the best match to the through-body color of the retaining walls and concrete pavers.

Sample	New Construction Cleaning (Type S mortar, 14 day cleaning)
All Submitted Split-face CMU's	Sure Klean® Custom Masonry Cleaner (1:2) OR (1:4) OR (1:6)
All Submitted Ground-face CMU's	Sure Klean® Burnished Custom Masonry Cleaner (1:2) OR (1:3)

Sample	Color Uniformity
All Submitted Split-face Retaining Walls	Sure Klean® Custom Masonry Cleaner (1:2) OR (1:4) OR (1:6) OR Sure Klean® Burnished Custom Masonry Cleaner (1:2) OR (1:3)
All Submitted Concrete Pavers	Sure Klean® Custom Masonry Cleaner (1:6) OR Sure Klean® Burnished Custom Masonry Cleaner (1:2) OR (1:3)

The most appropriate cleaner and dilution should be determined on the specific job-site, and will be dependent primarily on the nature and severity of soiling present at that location.

Apply all products in accordance with the manufacturer's recommendation provided on container labels and product data sheets. On-site testing should be conducted to determine the most appropriate cleaning product and procedures for a particular project. See product literature for additional application and product information.

Protective Water Repellents

The testing described below evaluates the suitability of water repellent treatments.

The surface treatments evaluated were selected for their suitability for application based on the following selection criteria:

1. Weatherproofing properties
2. Color change
3. Ease of application

Description of Products Evaluated – Protective Water Repellents

Sure Klean® Custom Masonry Sealer – A clear, solvent-based silicone elastomer formulated to weatherproof custom masonry units, cast stone, architectural concrete block, pre-cast concrete, wood and porous masonry. Custom Masonry Sealer penetrates and fills pores to prevent water penetration through exterior walls exposed to normal weathering.

Sure Klean® Weather Seal Siloxane WB Concentrate – A self-emulsifying water repellent concentrate designed for dilution with fresh water at the job site. This solvent-free blend of silanes and oligomeric alkoxy siloxanes mixes easily with water to produce a penetrating water repellent ideal for application to dense or porous masonry surfaces.

Sure Klean® Paver Enhancer – A solvent-based blend of high-quality siloxanes modified to provide excellent water repellency and color enhancement to interlocking concrete, fired clay, porous tile and many types of natural stone surfaces. Paver Enhancer penetrates and reacts with the surface to form a chemical bond, providing long-term durability, alkali resistance and superior breatheability.

Consolideck® Saltguard® WB – A ready-to-use water-based, VOC compliant silane/siloxane water repellent and “chloride screen” for the protection of concrete and masonry surfaces. Saltguard® WB penetrates more deeply than conventional water- or solvent-based water repellents. Low odor and alkaline stable, Saltguard® WB is ideal for field or in-plant application to concrete and most masonry surfaces. Saltguard® WB protects horizontal and vertical surfaces from moisture intrusion and chemical attack of chloride salts.

Stand Off® SLX100 Water & Oil Repellent – Combines water and oil repellency on most substrates to prevent staining by waterborne and oily substances. This modified “neat” silane system offers invisible protection and low volatility. The small molecular structure of SLX100 allows for maximum penetration at coverage rates higher than that of conventional silanes. Depth of penetration is controlled by the application rate (loading rate). This makes SLX100 ideal for protecting granite and other dense, color-sensitive surfaces.

Sample Preparation – Protective Water Repellents

The submitted samples were scored, allowed to dry, and to reabsorb atmospheric humidity for 24 hours prior to treatment. All products were applied by brush and allowed to cure in accordance with the recommendations in the 2005 PROSOCO, Inc. Product Guide.

Test Methods – Protective Water Repellents

Water Absorption Tube Test: RILEM II.4, 60 mph, 20 Minutes

The water absorption tube test simulating wind driven rain conditions was performed. This test simulates 60 mile per hour wind driven rain conditions for a period of 20 minutes. See Technical Services TECH Note RILEM Tube Test Procedures.

Conclusions – Protective Water Repellents

CMU's and Retaining Walls

Based upon laboratory evaluations, both Sure Klean® Custom Masonry Sealer and Sure Klean® Weather Seal Siloxane WB Concentrate diluted with nine and fourteen parts water provided excellent water repellency to each of the CMU's and retaining walls. In addition, Sure Klean® Custom Masonry Sealer provided slight color enhancement to the submitted samples. Sure Klean® Weather Seal Siloxane WB Concentrate diluted with nine parts and fourteen parts water did not alter the appearance of the samples in any way.

Concrete Pavers

Sure Klean® Paver Enhancer, Consolideck® Saltguard® WB, and Stand Off® SLX100 Water & Oil Repellent provided excellent water repellency to each of the submitted concrete pavers. In addition, Sure Klean® Paver Enhancer provided slight color enhancement to the submitted pavers. Neither Consolideck® Saltguard® WB nor Stand Off® SLX100 Water & Oil Repellent altered the appearance of the pavers in any way.

Recommendations – Protective Water Repellents

Recommendations for water repellency treatment for each sample submitted by Masolite, Fort Wayne, IN are provided in the chart below. Recommendations are based on the treatment that proved most effective at providing water repellency on all types submitted.

Sample	Water Repellents
"B.U." Split-face CMU "BHWT" Split-face CMU "Buff LW" Split-face CMU "Natural LW" Split-face CMU "Natural NW" Split-face CMU "Buff NW" Ground-face CMU "Edinburg Celtik Wall SRW" Split-face Retaining Wall "Essex Celtik Wall SRW" Split-face Retaining Wall "Sheffield Celtik Wall SRW" Split-face Retaining Wall "Buff Maso-lok SRW" Split-face Retaining Wall "Brown Versa-lok STD SRW" Split-face Retaining Wall "Grey Versa-lok STD SRW" Split-face Retaining Wall "Tan Versa-lok Tumble SRW" Split-face Retaining Wall	Sure Klean® Custom Masonry Sealer OR Sure Klean® Weather Seal Siloxane WB Concentrate (1:9) OR (1:14)

PROSOCO, Inc.

Page 23

Graffiti Control

These trials were conducted to determine the optimal graffiti control treatment for the submitted CMU's and retaining wall samples.

Description of Products Evaluated – Graffiti Control

Graffiti Control Treatments

Sure Klean® Custom Masonry Sealer – A clear, solvent-based silicone elastomer formulated to weatherproof custom masonry units, cast stone, architectural concrete block, pre-cast concrete, wood and porous masonry. Custom Masonry Sealer penetrates and fills pores to prevent water penetration through exterior walls exposed to normal weathering.

Products Evaluated for Graffiti Removal

Defacer Eraser® Graffiti Wipe – An easy-to-use graffiti remover that does not contain methanol, methylene chloride or other halogenated solvents prohibited on many projects. Graffiti Wipe removes a variety of graffiti stains from most smooth masonry, split-face concrete block, wood and metal surfaces.

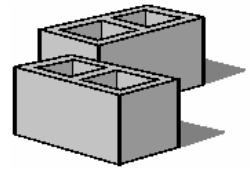

Sure Klean® Fast Acting Stripper – A thixotropic stripping compound formulated specifically for removal of high strength paints and coatings such as epoxies, polyurethanes, and floor enamels. Additionally, Fast Acting Stripper dissolves most spray paints, marking pens, lacquers and other graffiti.

Graffiti Agents

Interior/Exterior Spray Paint (Red)
Permanent Marker (Green)
Permanent Marker (Red)
Permanent Marker (Black)

PALLET TAG PROGRAM LABORATORY REPORT

Sample Preparation – Graffiti Control

This evaluation compares the effectiveness of the treatments tested to the untreated surfaces of the submitted samples in preventing staining of enamel spray paint and permanent markers.

Sections of the samples were treated with a wet-on-wet brushing application of Sure Klean® Custom Masonry Sealer in accordance with PROSOCO, Inc.'s 2005 Product Guide application instructions and then allowed to cure for at least one day. At the end of the cure period, a visual adverse effects evaluation was made and then the graffiti agents were applied to the substrates.

Spray paint and markers were applied as graffiti agents to all treated surfaces no sooner than one day following application of Sure Klean® Custom Masonry Sealer. Removal of the graffiti agents was attempted 24 hours after application of the graffiti agents, using Defacer Eraser® Graffiti Wipe and Sure Klean® Fast Acting Stripper.

Test Method – Graffiti Control

Chemical cleaners were evaluated using the following procedure:

1. Apply the product to a dry surface, soiled with graffiti.
2. Allow appropriate dwell time:
 - Graffiti Wipe 5 minutes
 - Fast Acting Stripper20 minutes
3. Pressure rinse thoroughly until water runs clear.*
4. Allow the surface to dry thoroughly and visually examine to determine effectiveness.

***Pressure Rinsing Equipment** – Masonry washing equipment generating approximately 1300 psi with a water flow rate of 1.9 gallons per minute delivered through a 45 degree fan spray tip was used for rinsing.

Conclusions – Graffiti Control

Based upon laboratory evaluations, graffiti removal was improved when the submitted samples were treated with Sure Klean® Custom Masonry Sealer prior to graffiti application. In addition, Sure Klean® Custom Masonry Sealer provided a slight color enhancement to the submitted samples.

Recommendations – Graffiti Control

Recommendations for graffiti control treatment for each type of CMU and retaining wall submitted by Masolite, Fort Wayne, IN are provided in the chart below. Recommendations are based on the treatment that proved most effective for providing graffiti repellency and the product that was most effective at removing the graffiti on all types submitted.

Sample	Graffiti Repellents	Graffiti Removers
All Submitted CMU's and Retaining Walls	Sure Klean® Custom Masonry Sealer	Defacer Eraser® Graffiti Wipe OR Sure Klean® Fast Acting Stripper

Apply all products in accordance with the manufacturer's recommendation provided on container labels and product data sheets. Because the severity of graffiti varies from location to location, on-site testing should be conducted to determine the most appropriate graffiti control product and procedure for a particular project.

PALLET TAG PROGRAM LABORATORY REPORT

Stain Repellency

These trials were conducted to determine the effectiveness of treatments in preventing food and oil staining on the submitted samples.

Description of Products Evaluated – Stain Repellency

Stain Repellent Treatments

Stand Off® Stone, Tile & Masonry Protector (STMP) – A penetrating oil and stain repellent that is an easy-to-use, low-VOC, low-odor protective treatment improves the stain resistance and simplifies maintenance cleaning of interior and exterior stone, quarry tile, concrete and masonry surfaces.

Stand Off® SLX100 Water & Oil Repellent – Combines water and oil repellency on most substrates to prevent staining by waterborne and oily substances. This modified “neat” silane system offers invisible protection and low volatility. The small molecular structure of SLX100 allows for maximum penetration at coverage rates higher than that of conventional silanes. Depth of penetration is controlled by the application rate (loading rate). This makes SLX100 ideal for protecting granite and other dense, color-sensitive surfaces.

Maintenance Cleaner

Enviro Klean® 2010 All Surface Cleaner – A “next-generation” product for cleaning and degreasing light-to-heavily soiled stone, tile, masonry and much more. Powerful enough for industrial use, flexible enough for jobs around the home, space-saving EK 2010 replaces a host of individual cleaning agents. It is suitable for home-use on windows, bathroom tub and tile, counter tops and more when diluted with water. It's concentrated enough for the toughest industrial cleaning jobs on concrete, metal and many other plant and warehouse surfaces. EK 2010 also removes Sure Klean® Weather Seal Siloxane PD overspray from windows.

Staining Agents Evaluated

<u>Products</u>	<u>Temperature</u>
Coca Cola	ambient (~70°F)
Ketchup	ambient (~70°F)
Mustard	ambient (~70°F)
Red wine	ambient (~70°F)
Balsamic Vinegar	ambient (~70°F)
Soy Sauce	ambient (~70°F)
Olive Oil	ambient (~70°F)
Wesson Oil	(~250°F)
Coffee	(~120°F)

Sample Preparation – Stain Repellency

Samples were cleaned with Enviro Klean® 2010 All Surface Cleaner diluted with 10 parts water, allowed to dry and absorb atmospheric moisture for 24 hours prior to treatment. Both products were applied by brush in accordance with the recommendations in PROSOCO, Inc.'s 2005 Product Guide and allowed to cure for at least 72 hours.

PALLET TAG PROGRAM LABORATORY REPORT

Test Method – Stain Repellency

Surface Beading Evaluation

The food and oil products were applied to the test areas by using a dropper creating a bead 0.5 – 1.0 cm in diameter. The beading properties of the oils and liquids were visually evaluated within two minutes after application. The results are reported as a rating based on the angle of contact between the base of the droplet and the substrate. A rating of “1 or 2” indicated the smallest angle of contact (<90°) which correlates to “above average” repellency. A rating of “3 or 4” indicates “average” repellency. A rating of “5 or greater” indicated that the oil quickly absorbed into the substrate and correlates to “below average” repellency.

Note: Non-free flowing staining agents such as ketchup and mustard are applied in a globular fashion and therefore are not evaluated for their beading properties.

Rating System (1-5)

1. No wetting of contact area (no darkening); angle less than 90°

2. Wetting contained to the contact area (slight darkening); angle is less than 90°

3. Wetting contained to the contact area (slight darkening); angle is greater than 90°, but less than 135°.

4. Wetting beyond the contact area (darkening); angle is greater than 135°

5. Wetting beyond the contact area (darkening); angle is flat.

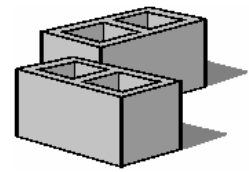

Stain Removal Evaluation

The soiling agents were allowed to dwell on the treated and untreated substrates for times of 24 hours, 4 hours, 1 hour, and 10 minutes. The test areas were then cleaned with Enviro Klean® 2010 All Surface Cleaner diluted 1 part concentrate to 10 parts fresh water and scrubbed under a stream of running water from a faucet. Samples were allowed to dry for 24 hours. Evaluation consisted of a visual examination of the tested areas to determine the percentage of staining removal.

PALLET TAG PROGRAM LABORATORY REPORT

Conclusions – Stain Repellency

Based upon laboratory evaluations, both Stand Off® Stone, Tile & Masonry Protector (STMP) and Stand Off® SLX100 Water & Oil Repellent improved the surface beading of the samples. In addition, at least one of the treatments evaluated was effective in repelling the staining agents, especially the oils, from the submitted samples.

Recommendations – Stain Repellency

Recommendations for stain resistance treatment for the concrete pavers submitted by Masolite, Fort Wayne, IN are provided in the chart below. Recommendations are based on the treatments that proved most effective for providing stain repellency on the submitted concrete pavers.

Sample	Stain Repellent	Maintenance Cleaner
"LaPorte C. Cobble SQ" "F. Beige DCM Rect" "S. Grey DCM SQ" "Charcoal Holland" "Rose Holland"	Stand Off® Stone, Tile & Masonry Protector (STMP) OR Stand Off® SLX100 Water & Oil Repellent	Enviro Klean® 2010 All Surface Cleaner (1:10)
"B. Beige Bergerac Rect"	Stand Off® SLX100 Water & Oil Repellent	

The ability of a stain repellent treatment to prevent staining is affected by a variety of factors. Therefore, on-site testing should be carried out for all installations with the recommended systems to ensure job site workmanship yields equivalent results.

Apply all products in accordance with the manufacturer's recommendation provided on container labels and product data sheets. On-site testing should be conducted to determine the most appropriate stain repellent product and procedures for a particular project. See product literature for additional application and product information.

Color Enhancement

Description of Products Evaluated – Color Enhancement

Sure Klean® Paver Enhancer – A solvent-based blend of high-quality siloxanes modified to provide excellent water repellency and color enhancement to interlocking concrete, fired clay, porous tile and many types of natural stone surfaces. Paver Enhancer penetrates and reacts with the surface to form a chemical bond, providing long-term durability, alkali resistance and superior breatheability.

Stand Off® Gloss 'N Guard – A highly durable protective coating for tile, pavers, terrazzo and other polished and unpolished masonry. Gloss 'N Guard dries to a high-gloss finish that enhances the natural beauty of treated surfaces.

Sample Preparation – Color Enhancement

Samples were cleaned with Enviro Klean® 2010 All Surface Cleaner diluted with 10 parts water, allowed to dry and absorb atmospheric moisture for 24 hours prior to treatment.

Test Method – Color Enhancement

The color enhancing products were applied by brush in accordance with the application instructions in the 2005 PROSOCO, Inc. Product Guide.

Recommendations – Color Enhancement

Recommendations for color enhancement for the concrete pavers submitted by Masolite, Fort Wayne, IN are provided in the chart below. Recommendations are based on the treatment that proved most effective in providing color enhancement to the submitted samples.

Sample	Color Enhancement
All Submitted Concrete Pavers	Sure Klean® Paver Enhancer

Apply all products in accordance with the manufacturer's recommendation provided on container labels and product data sheets. On-site testing should be conducted to determine the most appropriate product and procedures for a particular project. See product literature for additional application and product information.
