Borgert Products, Inc.
Project No. 0512-12 PTP

Six types of concrete pavers were submitted for testing to AMT Laboratories by PROSOCO Inc., with a request to determine the optimal concentration of cleaner that leaves the external surface looking most like the natural through-body color of the concrete paver during new construction operations. Additionally, the effectiveness of water repellents, stain repellents and color and sheen enhancement products suitable for concrete pavers was evaluated.

Color Uniformity was performed to determine the optimum dilution of the selected cleaners that provides the best match to the through-body color of the submitted samples. **Protective Water Repellent** testing was performed to evaluate which PROSOCO water repellent(s) are most effective at providing protection from wind driven rain. **Stain Repellency** testing was conducted to determine which PROSOCO product(s) are most effective at repelling and facilitating the removal of stains. **Color and Sheen Enhancement** was evaluated to determine which PROSOCO product(s) are most effective at providing color and/or sheen enhancement to the submitted samples.

The attached report provides information about the PROSOCO products tested and descriptions of the test methods. The report includes test results as well as conclusions and recommendations. Recommendations are also provided in the chart below.
