Sure Klean® Heavy Duty Paint Stripper is compliant with all national, state and district regulations.

**OVERVIEW**
Sure Klean® Heavy Duty Paint Stripper, an alkaline formula with organic solvents, removes multiple layers of paint and graffiti from masonry surfaces. This “slow-working,” extended-contact remover, remains active for 24 hours. One application of Heavy Duty Paint Stripper dissolves heavy accumulations of paint, most spray paint, lacquers and graffiti, restoring old masonry to its original appearance.

Follow paint removal with masonry neutralizing using the appropriate Sure Klean® product. Heavy Duty Paint Stripper contains no methanol, methylene chloride, or chlorinated solvents, and is water rinsable and nonflammable.

**SPECIFICATIONS**
For all PROSOCO product specifications visit www.prosoco.com and click on “SpecBuilder” or “Solution Finder.”

**ADVANTAGES**
- Remains active up to 24 hours, cutting through heavy accumulations of paint and most types of graffiti.
- Nonflammable and highly effective on many common paint coatings.
- Gel consistency adheres to vertical surfaces; reduces spillage.
- Can be applied by brush, roller or conventional airless spray equipment. See “Equipment” section.

**Limitations**
- Product efficiency is reduced during cold weather. Surface and air temperatures should be at least 50°F (10°C) during application.
- Contains highly alkaline ingredients. Neutralize treated surfaces with Sure Klean® Limestone & Masonry Afterwash.
- Do not use on wood. Alkaline ingredients raise the grain of wood and may interfere with paint adhesion or performance.
- Not appropriate for metal surfaces.

**REGULATORY COMPLIANCE**
VOC Compliance
Sure Klean® Heavy Duty Paint Stripper is compliant with all national, state and district regulations.
Heavy Duty Paint Stripper

PREPARATION
Protect people, vehicles, property, plants and all non-masonry surfaces, and surfaces not set for cleaning from product, splash, rinse, residue, fumes and wind drift. Some glass and metal finishes may be damaged by exposure to paint stripping products. Test and protect if necessary. Sure Klean® Strippable Masking is not appropriate for use with paint stripping products.

Surface and Air Temperatures
Cleaning when temperatures are below freezing or will be overnight may harm masonry. Best air and surface temperatures for cleaning are 50°F (10°C) or above. If freezing conditions exist before application, let masonry thaw.

Equipment
Apply using caustic-resistant brushes, rollers or conventional airless sprayers fitted with viton, teflon, or other caustic-resistant seals and parts. The spray hose should be poly-lined and chemical-resistant, pressure-rated for the spray. Spray tips need a minimum orifice size of 1/4 inch to prevent tip fouling. Spray equipment with gravity feed hopper attachments can also be used. Do not use aluminum containers or spray equipment. Sprayers should be adjusted to the lowest possible pressure setting that will produce an even flow of material. For the most efficient spray application, large airless sprayers with a minimum capacity of 1 gallon per minute are recommended.

Rinse with enough water and pressure to flush spent cleaner and dissolved soiling from the masonry surface and surface pores without damage. Inadequate rinsing leaves residues which may stain the cleaned surface.

Masonry-washing equipment generating 400–1000 psi with a water flow rate of 6–8 gallons per minute is the best water/pressure combination for rinsing porous masonry.

APPLICATION
Before use, read “Preparation” and “Safety Information.”

Always test to ensure desired results. Coverage estimates depend on surface texture and porosity.

</table>

Rinsing pressures greater than 1000 psi and fan spray tips smaller than 15° may permanently damage sensitive masonry. Water flow-rates less than 6 gallons per minute may reduce cleaning productivity and contribute to uneven cleaning results.

Storage and Handling
Store in a cool, dry place. Always seal container after dispensing. Do not alter or mix with other chemicals. Published shelf life assumes upright storage of factory-sealed containers in a dry place. Maintain temperature of 45–100°F (7–38°C). Do not double stack pallets. Dispose of in accordance with local, state and federal regulations.

ALWAYS TEST each type of surface and paint coating for suitability, dwell-time, number of applications and results before overall application. Use the following application instructions. Let test areas dry thoroughly before inspection.

Three test panels are recommended. The first should dwell 1–2 hours, the second 4–6 hours, and the third 12 hours or overnight. After all test panels have been pressure rinsed, evaluate results and determine optimum dwell time.
**Heavy Duty Paint Stripper**

**Dilution**
Use in concentrate. Do not dilute or alter.
Stir or mix well before use.

**Window Frame Protection**
Where possible, finish paint stripping and cleaning before replacing windows. Heavy Duty Paint Stripper may harm window frames of wood, metal, vinyl or other material. Take these precautions:

1. Protect window frames using polyethylene secured by duct tape. Do not use masking tape.
2. When applying around protected frames, carefully brush apply to avoid contacting the protected frame surfaces.
3. Any accidental spill, drip, or splash must be cleaned off protected frames immediately to ensure that stripper does not contact frame surfaces.
4. Do not remove window frame protection until all stripping and rinsing is complete. If protection comes loose, it must be secured before work can proceed.

**Application Instructions**
Apply test panels according to the following procedures. General application procedures should be determined based on testing results.

1. Remove all loose and peeling paint using pressure water or scraper. Let surface dry thoroughly.
2. Apply approximately 1/8 inch coat of stripper.
3. Leave paint stripper on the surface until the paint is obviously “lifted” or dissolved. If stripper is left on the surface unattended, take precautions to prevent pedestrians from coming near treated surfaces.

NOTE: When removing 15–20 coats of paint, a second application directly over the first application (before rinsing) often improves stripping efficiency. Let the first coat dwell for the predetermined time before the second application.

4. Using pressure-rinsing equipment, and working from the bottom to the top, thoroughly rinse the stripper and solubilized paint from the surface. Use as much water as possible.
5. Reapply stripper if needed. Shorter dwell times are usually enough on second applications where only a little paint remains.

**Surface Neutralization**
When all paint has been removed, treated surfaces must be neutralized by applying a solution of Sure Klean® Limestone & Masonry Afterwash pursuant to the application instructions on the product label.

Failure to properly clean and neutralize treated surfaces with the proper cleaning compound results in an alkaline residue that may cause unsightly white haze and interfere with adhesion of clear sealers or future paint coatings.

6. Brush apply the prepared Afterwash to treated surfaces in a gentle scrubbing manner. Let Afterwash stay on the surface 3 to 5 minutes.
7. Rinse the treated area thoroughly. Remove all traces of paste residue and solubilized paint coatings. **NOTE:** When rinsing, heated water (150–180°F; 65–82°C) improves removal efficiency and reduces rinse water and liquid waste.
8. Using pH papers, pH pen or pH indicator solutions, check treated surfaces to ensure neutralization has been achieved. Repeat steps 6–7 above if needed until surface pH is 5.0 to 9.0.
9. Let neutralized surface dry thoroughly. Before applying new surface coatings, check the cleaned surface again using pH papers, pH pen or pH indicator solutions. Check that surface pH is neutral. Inadequate neutralization may cause surface discoloration or failure of new surface coatings.

**Cleanup**
Clean tools and equipment using fresh water.
Heavy Duty Paint Stripper

Repainting
Where surfaces are to be repainted, the surface pH should be tested to ensure all caustic residues have been completely removed. Using pH papers, pH pen or solutions indicator, check treated surface to ensure that neutralization has been achieved. Surface pH should be between 6–8 before repainting. Where surface pH is above a pH of 8, application of the appropriate Sure Klean® cleaner, such as Sure Klean® Limestone & Masonry Afterwash is recommended.

SAFETY INFORMATION
Sure Klean® Heavy Duty Paint Stripper is an alkaline product and has safety issues common to corrosive materials. Use appropriate safety equipment and job site controls during handling and application. Read the full label and MSDS for precautionary instructions before use.

First Aid
Ingestion: If conscious, give large amounts of milk or water and call a physician, emergency room or poison control center immediately. Do not induce vomiting.
Eye Contact: Rinse eyes thoroughly for 15 minutes while lifting eyelids to assure thorough cleaning. Get immediate medical assistance.
Skin Contact: Remove contaminated clothing and rinse thoroughly for 15 minutes. Get medical attention as needed. Launder contaminated clothing before reuse.
Inhalation: Remove to fresh air. Give artificial respiration if not breathing. Get immediate medical attention.

WARRANTY
The information and recommendations made are based on our own research and the research of others, and are believed to be accurate. However, no guarantee of their accuracy is made because we cannot cover every possible application of our products, nor anticipate every variation encountered in masonry surfaces, job conditions and methods used. The purchasers shall make their own tests to determine the suitability of such products for a particular purpose.

Lead-Based Paint Removal
PROSOCO offers a line of products specifically formulated for removing lead-based paint. Enviro Klean® paint removers were developed for lead-based paint abatement projects where removal, containment and disposal of lead containing wastes are of primary concern. For more information on use of Enviro Klean® products, see PROSOCO Technical Bulletin 1291-LBPA. Call Customer Care at 800-255-4255 for a free copy.

Other Uses
Heavy Duty Paint Stripper aids in removing heavy smoke, carbon and mildew stains below window sills, under eaves and other areas where dirt and carbon buildup is severe. Always use Sure Klean® Limestone & Masonry Afterwash or Sure Klean® Restoration Cleaner to neutralize the treated surface.

Heavy Duty Paint Stripper removes “vine stains” produced by vines or foliage growing on a masonry wall. Apply and let dwell for 12 hours or overnight. Pressure rinse and afterwash with Sure Klean® Limestone & Masonry Afterwash or other Sure Klean® restoration cleaner.

Heavy Duty Paint Stripper is a caustic compound and is not recommended for stripping paint from wood surfaces or gypsum plaster. Direct contact with wood can damage or stain the wood surface. Caustic strippers should never be used to strip finely-finished wood surfaces or wood furniture. Follow all appropriate precautionary measures listed in the data sheet.

CUSTOMER CARE
Factory personnel are available for product, environment and job-safety assistance with no obligation. Call 800-255-4255 and ask for Customer Care - technical support.

Factory-trained representatives are established in principal cities throughout the continental United States. Call Customer Care at 800-255-4255, or visit our web site at www.prosoco.com, for the name of the Sure Klean® representative in your area.
