Window Head Using SS ThruWall Flashing - S5.1

Sheathing Wall Construction with gypsum, plywood or OSB sheathing.

Install the window “plumb, level and square” into the rough opening prepared with Joint & Seam Filler and/or FastFlash.

Use AirDam as the interior air sealant to ensure compatibility with the treated rough opening and create a long-lasting, weather-tight seal (see S7.1).

Apply a thick bead of FastFlash or Joint & Seam Filler across the top of the rough opening. Wet-set the R-Guard SS ThruWall flashing. Mechanically fasten the SS ThruWall flashing.

Apply a bead of FastFlash or Joint & Seam Filler to the top edge of the SS ThruWall flashing. Use a dry trowel or spatula to tool and seal the joint. Create a profile that directs bulk water away from the joint. Allow joint to skin over.

To transition from the air- and water-resistant barrier to the SS ThruWall flashing, apply a bead of FastFlash immediately above and below the top edge of the SS ThruWall flashing. Use a dry joint knife or trowel to spread the wet product to create a seamless counter-flashing membrane which directs bulk water from the air- and water-resistant barrier to the SS ThruWall flashing. Apply additional FastFlash as needed to create an opaque, monolithic flashing membrane free of voids or pinholes.

Note: Trade sequencing may make wet-setting impractical and it is not required.
