

Thank you for your purchase. PROSOCO is a 4th-generation, family-owned company based in Lawrence, Kansas, and we appreciate your business!

Oil & Grease Stain Remover

Oil & Grease Stain Remover safely and easily pulls stains out of pavers, concrete, stone, and other porous surfaces. It is most often used on garage floors and driveways.

- This is a poultice cleaner (think of a thick, pancake-like batter).
- While it dries, it pulls oil and grease out of the surface and into the poultice.
- It removes motor oil, brake and power-steering fluid, anti-freeze, hydraulic fluids, cooking oils, food grease and other oil-based stains.
- It can even remove old, deeply-set stains with multiple applications.
- It is easy and safe to use.

1

PREPARE THE SURFACE

Scrape debris and buildup from surface. Shake the Oil & Grease Stain Remover container well. This product is ready to use straight from the container. No dilution is needed.

2

POUR OIL & GREASE STAIN REMOVER OVER THE STAIN

Simply pour the mixture over the stain, **ensuring that it covers the stain entirely**, plus an additional inch on all sides. The mixture is self-leveling, so you do not need to manually spread the product over the stain.

3

LET THE POULTICE DRY COMPLETELY

Attempting to remove the poultice before it has dried completely will not produce good results and may leave a white residue on the floor. **Allowing the poultice to dry overnight is highly recommended.** And in some climates, additional drying time may be required. A de-humidifier may be used to speed the dry time on indoor stains. It should look like this when it is dry.

4

EASY CLEAN-UP AND DISPOSAL

Once the poultice is completely dry, you may sweep up the dried poultice and its absorbed contaminants for easy disposal.
