

THE MARBLE EXTERIOR BASE OF THIS 30-STORY BUILDING IN OMAHA, NEB., RECEIVED A RECENT REFRESH.

Liquid Marble Cleaner from PROSOCO is a phosphate-free, low-odor gel designed specifically for the purpose of cleaning, restoring and maintaining polished stonework or glazed masonry.

The view of Omaha, Nebraska's downtown would not be the same without WoodmenLife Tower (previously known as Woodmen Tower). This 30-story building, completed in 1969 and designed by Leo Daly, stood as the tallest building in both Omaha and Nebraska for 30+ years.

To clean the porous marble on the building's bottom five stories in the summer of 2020, McGill Restoration used PROSOCO's **Liquid Marble Cleaner**, a cleaner that loosens and dissolves surface dirt, carbon buildup and atmospheric stains off polished stonework and glazed masonry.

James Bouckaert, estimator and project manager for McGill Restoration, said test samples were completed on six stones before landing on Liquid Marble Cleaner. Ultimately, he was impressed with the product's ease of application. To protect the marble and keep the building clean for years to come, crews finished the job with an application of PROSOCO's Natural Stone Treatment.

"With all cleaning, we go from least aggressive to more aggressive," Bouckaert said. "We reached out to our suppliers and asked them what they would use on the marble, and they recommended Liquid Marble Cleaner."

Liquid Marble Cleaner

- Safe and easy-to-apply cleaner for polished stonework and glazed masonry
- Cleans surface dirt, carbon buildup and atmospheric stains
- Suitable for interior or exterior applications
- Non-acidic, non-fuming, phosphate-free & low-odor
- Gel form clings to horizontal and vertical surfaces
- Powerful in concentrate, flexible in dilution
- Will not etch glass or metal surfaces adjacent to cleaning site
