

PAIN IT. PROTECT IT.

BMC® II combines the beauty of high-quality paint with the protective power of a breathable water repellent. BMC II lets water vapor escape from masonry, while stopping destructive liquid water from entering. The performance characteristics of masonry are preserved, and its service life is prolonged, making it more resistant to weathering (UV, moisture and soiling). BMC II is also more durable and longer lasting than most conventional paints, as it is specifically designed for masonry applications.

BEAUTIFUL

BMC II dries to an attractive matte finish and resists soiling, creating a protective and enduring finish.

VOC-COMPLIANT

This formulation is suitable for interior and exterior surfaces and is compliant in all known national and state AIM VOC regulations. BMC II is also SCS Indoor Air Quality-certified & LEEDv4-ready.

BREATHABLE

This product does not trap moisture, maintaining the masonry's natural ability to breathe, while keeping bulk water out.

LEED READY

INDOOR ADVANTAGE GOLD
BUILDING MATERIALS

Beautiful & Breathable

- Highly vapor-permeable
- Field-proven technology used on the U.S. Capitol and other U.S. and international landmarks
- Excellent UV stability and hiding
- Easy application with roller, brush or spray
- Exceptional color retention and adhesion
- Helps contribute to SCS certification and LEED credits
- Meets and exceeds air barrier requirements of ASTM E 2357
- Silicone emulsion formula resists soiling, staying cleaner longer than other paints

BMC II is available in four different bases, providing an endless range of colors. Call PROSOCO Customer Care or your local distributor for additional information about BMC® II.
